

Clara and the Changing Weather

**Story by
Rahmatul Husni**

In the small town of Sunnyvale, Clara, a bright and curious 8-year-old, noticed that the weather was acting strangely.

It was warmer in the winter and some flowers were blooming too early. She decided to ask her friend, Mr. Whiskers the cat, what was happening.

Mr. Whiskers explained that the Earth is getting warmer because of something called climate change. It happens when too many gases, like carbon dioxide, trap heat in our atmosphere.

Clara learned from Mr. Whiskers that because of the extra warmth, ice at the poles is melting. This is bad for polar bears and other animals that live there.

Mr. Whiskers told Clara that trees help fight climate change by absorbing CO₂. Clara decided she wanted to help by planting more trees.

Mr. Whiskers explained that using less electricity from coal and oil can also help, and using energy from the sun and wind is much better for our planet.

Inspired by her day with Mr. Whiskers, Clara promised to always turn off lights when she wasn't using them and to tell her friends about how they can help the Earth too.

With every small action, Clara knew she was making a big difference. She looked forward to a greener future, feeling hopeful about taking care of her planet.
